

CMRTC AI Widget Website Installation Guide

Prepared for CMR Technical Campus

A step-by-step guide for adding, testing and supporting the VoiceDots AI assistant on the CMRTC website.

Overview

The CMRTC AI Widget adds an AI assistant to the CMRTC website. It provides visitors with four specialist areas: About Us, Courses, Admissions and Placements. The widget appears as a minimized button in the bottom-right corner and expands when a visitor selects it.

Installation requires adding one HTML snippet to the website. CMRTC does not need to place an API key or password in its website code.

Installation

1. Open the website template, global footer or tag-management system that is loaded on every page.
2. Paste the complete code below immediately before the closing `</body>` tag.
3. Save or publish the change.
4. Clear the website or WordPress cache, if caching is enabled.
5. Open the website in a private/incognito browser window and follow the checks in the Verification section.

Widget code

```
<!-- CMR Technical Campus AI Team - Voicedots AI widget -->
<voicedots-ai config='{
  "title": "CMRTC AI Team",
  "brandName": "CMRTC AI",
  "pipeline": "gemini",
  "agentId": "voicedots_agent_cmrtc_fbe08f2d9d25",
  "minimized": true,
  "themeColor": "#173B73",
  "logo": "https://cdn.jsdelivr.net/gh/Voicedots-AI-Deployment/animations@main/voicedotslogo.svg",
  "pos": "right",
  "avatars": [
    {
      "name": "about",
      "role": "About Us",
      "avatar": "https://cdn.jsdelivr.net/gh/Voicedots-AI-Deployment/animations@main/sales.lottie"
    },
    {
      "name": "courses",
      "role": "Courses",
      "avatar": "https://cdn.jsdelivr.net/gh/Voicedots-AI-Deployment/animations@main/support.lottie"
    },
    {
      "name": "admission",
      "role": "Admissions",
      "avatar": "https://cdn.jsdelivr.net/gh/Voicedots-AI-Deployment/animations@main/ceo.lottie"
    },
    {
      "name": "placement",
      "role": "Placements",
      "avatar": "https://cdn.jsdelivr.net/gh/Voicedots-AI-Deployment/animations@main/loan.lottie"
    }
  ]
}'></voicedots-ai>
<script type="module"
  src="https://cdn.jsdelivr.net/gh/Voicedots-AI/client-ai-widget-source@main/builds/cmrtc/widget.js">
</script>
```

Important: copy the entire snippet without changing the agent ID, quotation marks, element name or script address.

WordPress installation

Use the theme's global footer area or a trusted header-and-footer code manager. Add the snippet as HTML in the footer/body-end area and publish it site-wide. Do not paste it into the visible text editor of an individual page. If the site uses a cache or optimization plugin, clear its cache after publishing.

Google Tag Manager installation

1. Create a new **Custom HTML** tag.
2. Paste the complete widget code into the tag.
3. Set the trigger to **All Pages**.
4. Preview the container and verify the widget.
5. Publish the container.

Only one copy of the tag should run on a page.

Verification

After installation, confirm all of the following:

- A minimized CMRTC AI button appears in the bottom-right corner.
- Selecting the button opens the widget.
- About Us, Courses, Admissions and Placements are visible.
- The browser requests microphone permission when voice conversation is started for the first time.
- A test question receives a spoken response.
- The widget works on both desktop and mobile pages.

Suggested test questions:

- “Where is CMR Technical Campus located?”
- “What is the CMRTC counselling code?”
- “How many CSE seats are available?”
- “What is the latest published highest placement package?”

Browser and network requirements

- The website must be served over HTTPS for microphone access.
- Visitors must allow microphone permission to use voice features.
- The browser/network must allow scripts, images and animation assets from `cdn.jsdelivr.net`.
- The browser/network must allow secure WebSocket connections to `voice.voicedots.io`.

If CMRTC uses a Content Security Policy, its website administrator may need to allow these hosts in the relevant `script-src`, `connect-src`, `img-src` and `media` directives. The exact policy change should be reviewed by the website administrator because existing policies differ between websites.

Troubleshooting

The widget does not appear

- Confirm the complete snippet is present in the final page source.
- Confirm it is inserted as HTML and not displayed as visible text.
- Clear all website, plugin and CDN caches.
- Check that the code was added to the global template or All Pages trigger.
- Remove any duplicate or older VoiceDots widget snippet.

The widget opens but does not connect

- Confirm the page is running on `https://cmrtc.ac.in` or `https://www.cmrtc.ac.in`.
- Confirm that the network allows `wss://voice.voicedots.io`.

- Send the browser console error and affected page address to VoiceDots support.

Voice does not start

- Allow microphone access in the browser.
- Confirm the page is served over HTTPS.
- Test in a supported release of Chrome, Edge, Safari or Firefox.
- Check whether an institutional firewall blocks microphone or WebSocket use.

The widget appears twice

The code has been installed in more than one location, such as both the theme footer and Google Tag Manager. Keep one installation and remove the duplicate.

Updating or removing the widget

VoiceDots can publish normal widget improvements without requiring CMRTC to replace the installation code. To remove the widget, remove the complete `<voicedots-ai>...</voicedots-ai>` element and its following `<script>` element, then clear the website cache.

Support information to provide

When requesting assistance, please send:

- The page URL where the issue occurs
- Device and browser name
- A screenshot or short screen recording
- Approximate time of the test
- Any browser-console error visible to the website administrator

Do not send passwords or website administrator credentials.
